

# Enterprise Resilience Management Systems

How healthy is your Supply Chain Security?  
Build your Resilience to remain Business Competitive

## The Situation

As part of the Logistics Community, do you have concerns about the security of your supply chain? Are the conflicting demands of supply chain security regulations and expectations from your clients, industry and government affecting your bottom-line? It is common for organisations in your industry to react by implementing one or more security programmes to manage and monitor its supply chain. Is there not a common, holistic and recognised approach for the management of supply chain security that can be adopted?

## The Strategy

The ISO 28000:2007 standard for Supply Chain Security Management presents the most effective solution in managing supply chain security concerns based on a common integrated security management system approach. As the country with the highest number of companies achieving ISO 28000 Certification, Singapore is has become a global showcase of how ISO 28000 can help all companies, including SMEs, manage the supply chain security of their businesses and meet the expectations and requirements set by other programmes like STP, STP Plus, RCAR, CTPAT, EU AEO and TAPA.

## What Exactly is ISO 28000:2007

ISO 28000 (published 2007) is a global management system specification which has been developed and introduced in response to a demand from industry for a common security management standard, with the ultimate objective of improving the overall security of supply chains.

As an overarching management system designed to ensure a higher security functionality, the result is operational efficiencies that will reduce business costs and increase your industry competitiveness and market share.

## The Solution

LSA offers internal compliance audit and consulting services to determine the readiness of your company in meeting ISO 28000 requirements. This will involve an on-site evaluation and the production of a follow-on compliance report.

Companies can use this report as an initial step to develop your ISO 28000 implementation roadmap. Once developed, this roadmap can guide management actions to assure optimum utilisation of resources to implement ISO 28000 at a pace consistent with the organisations business goals, objectives and priorities.

Consultants

LSA Consultants Pte Ltd  
8 Eu Tong Sen Street  
#14-94 The Central
